

Is your child already facing acne?

While most people think of acne as being a rite of passage for teenagers, it can affect children much younger. Now local doctors are evaluating an investigational topical medication, already approved to treat children ages 12 and older, for its ability to eliminate acne in younger children.

To qualify for this research study, your child must:

- Be 9 to 11 years of age
 - Have acne on the face, with at least 30 active acne blemishes

Qualified participants will receive study-related medical evaluations and study medication at no cost. Reimbursement for time and travel may also be provided.
