Dr. April Hill is a professor of biology and director of the University of Richmond’s HHMI funded Undergraduate Science Education program. In addition to developing and teaching interdisciplinary first-year research-centered STEM courses, she oversees a summer bridge program that focuses on building community and research skills for incoming students who are from groups traditionally underrepresented in the sciences. She is passionate about undergraduate research and uses sponges to ask questions about the gene regulatory networks important in the development of body plans and symbioses. She is a NSF, HHMI, NIH-NIGMS PULSE Vision & Change Leadership Fellow. Her seminar will focus on ways departmental and institutional reform can catalyze improvement of undergraduate life science education.

Date and Time:
Friday, May 15, 2015, 11:00 am

Place:
West Lecture Hall
Daniel I Kessler Teaching Labs
Rutgers University, Busch Campus
675 Hoes Lane West
Piscataway NJ 08854
